

Remote Layout for MiX16 ShowCue and TouchOSC

This is a template for the [MiX16 App ShowCuePro](#) for TouchOSC...

TouchOSC can be downloaded from the [Hexler Website](#)...(or App-Store, Google-Play etc)

TouchOSC runs on Computers (Mac, Windows, Linux), and all other devices (iOS and Android) as tablettes, iPhones and iPads

My latest Layout version is actually V2.5; and you'll find also layouts for phones and tablettes (less functionalities, but clearer and bigger graphic layout.

OSC-Control must be activated in the MiX16 Show-Cue parameters-setup !

The IP Addresses and the OSC INPUT and OUTPUT Ports must be set correctly in both :

TouchOSC and MiX16 Show Cue ! If both are on the same computer the IP-Address should be :

127.0.0.1 ... Especially for OSC-Feedback you must set the IP-Address and the OSC-Port correctly in MiX16 ShowCuePro ! If you don't have feedback, you may verify these settings first !

Please have a look in the pics-folder for visual help for the setup-settings.

In my example, I set the ports to 7200 and 7201, but you can use any other free port you want !

I sometimes update some of these Layouts, so it may be worth to go to my [Github-Page](#) from time to time, to see if there are any updates (usually notified in the Readme-Files).

Please contact me if you have any suggestions or requests and any help is always welcome !

Have Fun
